GUIDELINES

What would guidelines look like if they were written by people:

- 1) who will be using them
- 2) with no industry conflicts

Simplified lipid guidelines

Prevention and management of cardiovascular disease in primary care

G. Michael Allan MD CCFP Adrienne J. Lindblad ACPR PharmD Ann Comeau MN NP CCN(C) John Coppola MD CCFP
Brienne Hudson MD CCFP Marco Mannarino MD CCFP Cindy McMinis Raj Padwal MD MSc
Christine Schelstraete Kelly Zarnke MD MSc FRCPC Scott Garrison MD PhD CCFP Candra Cotton
Christina Korownyk MD CCFP James McCormack PharmD Sharon Nickel Michael R. Kolber MD CCFP MSc

Can Fam Phy 2015;61:857-67

Thresholds for discussion NOT thresholds for treatment

CLINICAL PRACTICE GUIDELINES

Simplified guideline for prescribing medical cannabinoids in primary care

G. Michael Allan MD CCFP Jamil Ramji Danielle Perry Joey Ton PharmD Nathan P. Beahm PharmD
Nicole Crisp RN MN NP-Adult Beverly Dockrill RN Ruth E. Dubin MD PhD FCFP DCAPM Ted Findlay DO CCFP FCFP
Jessica Kirkwood MD CCFP Michael Fleming MD CCFP FCFP Ken Makus MD FRCPC Xiaofu Zhu MD FRCPC
Christina Korownyk MD CCFP Michael R. Kolber MD CCFP MSc James McCormack PharmD Sharon Nickel
Guillermina Noël MDes PhD Adrienne J. Lindblad ACPR PharmD

Can Fam Phy 2018;64:111-120

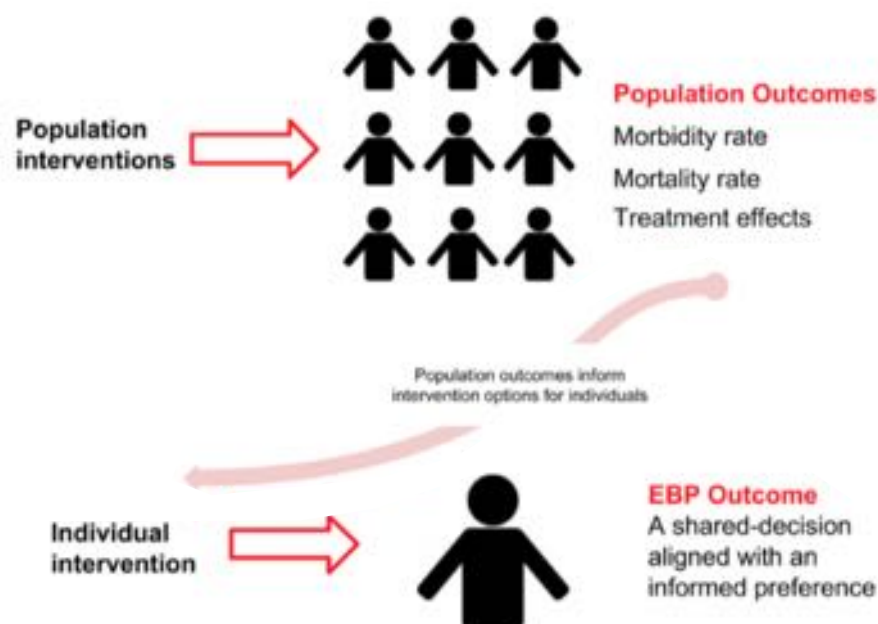

OPEN ACCESS

Shared decision is the only outcome that matters when it comes to evaluating evidence-based practice

James McCormack,¹ Glyn Elwyn²

“in the vast majority of circumstances, the only outcome of relevance for EBP is to measure whether a shared decision was made”

doi:10.1136/ bmjebm-2018-110922

Just a few of the diagnoses that are solely or partially lab-based dependent

Acid-Base Disorders	Celiac Sprue	Folic Acid or B9 Deficiency	Inhalation anthrax	Nephrotic Syndrome	SLE
Acidosis and Alkalosis	Cervical Cancer	Food and Waterborne Illness	Inherited Copper Toxicity	Neural Tube Defects	Small Cell Lung Cancer
Acidosis/Alkalosis	CF	Food Poisoning	Insulin Resistance	Neuropathy	Spina bifida
aCL Syndrome	CFIDS	Fungal Infections	Insulin Resistance Syndrome	NHL	Spinal dysraphism
ACS	CFS	Gastroenteritis	Iron Overload Disease	Non-Hodgkin lymphoma	Spinal Meningitis
Acute DIC	CHF	Gluten-Sensitive Enteropathy	Iron Storage Disease	Non-Small Cell Lung Cancer	SSc
Acute Idiopathic Polyneuritis	Chlamydia	Gonorrhea	Jaundice	Nontuberculous Mycobacteria	Stable angina
Acute Inflammatory Demyelinating	Chronic Fatigue and	Gout	JIA	Nontuberculous Mycobacteria Infections	Staph
Polyneuropathy	Immune Dysfunction Syndrome	Gouty Arthritis	JRA	NTD	Staph aureus
Acute Kidney Injury	Chronic Fatigue Syndrome	Graves Disease	Juvenile Idiopathic Arthritis	NTM	Staph Infections
Acute Myocardial Infarct	Chronic Kidney Disease	GSE	Juvenile Rheumatoid Arthritis	OA	Staph Infections and Methicillin-Resistant
Acute Renal Failure	Chronic Thyroiditis	Guillain-Barré Syndrome	Keratoconjunctivitis Sicca	Obesity Syndrome	Staphylococcus aureus
AD	Circumscribed Scleroderma	H1N1	Kidney Disease	Osteoarthritis	Staphylococcus aureus
Addison Disease	Cirrhosis	H3N2	Lactase Deficiency	Osteoarthritis	STDs
Adrenal Insufficiency	CKD	H5N1	Lactose Intolerance	Osteoporosis	Stein-Leventhal Syndrome
Adrenal Insufficiency and Addison Disease	Coagulopathy	H7N9	Landry's Ascending Paralysis	Ovarian Cancer	Sticky Blood Syndrome
AKI	Cobalamin Deficiency	Hashimoto Thyroiditis	LE	PA	STIs
Albuminuria	Colon Cancer	HBP	Lead Poisoning	Pancreatic Cancer	Stomach Flu
Alcohol dependence	Colorectal Cancer	HD	Leukemia	Pancreatic Diseases	Stroke
Alcoholism	Community-Acquired Pneumonia	Healthcare-Associated Pneumonia	Limited Cutaneous Scleroderma	Pancreatic Insufficiency	Subacute Cutaneous Lupus
Allergies	Congenital Adrenal Hyperplasia	Heart Attack	Linear Scleroderma	Pancreatitis	Swine Flu
Alzheimer Dementia	Congenital Alactasia	Heart Attack and Acute Coronary Syndrome	Liver Disease	Parathyroid Cancer	Syndrome X
Alzheimer Disease	Congestive Heart Failure	Heart Disease	Lobar Pneumonia	Parathyroid Diseases	Syphilis
AMI	Conn Syndrome	Heart Failure	Localized Scleroderma	PCOS	Systemic Exertion Intolerance Disease
Anemia	Consumption Coagulopathy	Hematuria	Lower Respiratory Tract Infection	Pelvic Inflammatory Disease	Systemic Lupus Erythematosus
Anencephaly	Copper Storage Disease	Hemochromatosis	Lung Cancer	Peptic Ulcer	Systemic Scleroderma
Angitis	CREST	Hemoglobin Abnormalities	Lung Diseases	PID	Systemic Sclerosis
Angina	Crohn Disease	Hemoglobin Barts	Lupus	Pituitary Disorders	TB
Angina pectoris	Cushing Syndrome	Hemoglobin C Disease	Lupus Anticoagulant Syndrome	Plasma Cell Dyscrasia	Testicular Cancer
Ankylosing Spondylitis	Cutaneous anthrax	Hemoglobin E Disease	Lupus Erythematosus	Plasma Cell Myeloma	Thalassemia
Anthrax	CVD	Hemoglobin S	Lyme Disease	Plasma Cell Neoplasm	Thrombophilia
Anticardiolipin Antibody Syndrome	Cystic Fibrosis	Hemoglobin Variants	Lymphocytic Thyroiditis	Plasmacytoma	Thyroid Cancer
Antiphospholipid Antibody Syndrome	Degenerative Joint Disease	Hemoglobinopathy	Lymphoma	Plasmacytoma of Bone	Thyroid Diseases
Antiphospholipid Syndrome	Dehydration	Hepatic Disease	Malabsorption	Pneumonia	Toxemia
aPL Syndrome	Dermatosclerosis	Hepatitis	Malaria	Polycystic Ovary Syndrome	Toxic Diffuse Goiter
APLS	Diabetes	Hepatolenticular Degeneration	Malignancy	Porphyria	Travelers' Diseases
APS	Diabetes mellitus	Hereditary Persistence of Fetal Hemoglobin	Malignant tumor	Post-infectious Arthritis	Trich
ARF	Diarrhea	Herpes	Malnutrition	Pre-eclampsia	Trichomonas
Arteritis	DIC	Herpes Zoster	MDS	Pregnancy	Trichomoniasis
Arthritis	Diffuse Cutaneous Scleroderma	High Blood Pressure	ME	Pregnancy-induced Hypertension	Trisomy 21
AS	Diffuse Thyrotoxic Goiter	HIV	Melanoma	Presenile Dementia	Tuberculosis
Asthma	Disaccharidase Deficiency	HIV Infection and AIDS	Meningitis and Encephalitis	Primary Aldosteronism	Types of Liver Disease
Atypical Mycobacteria	Discoïd Lupus	HL	Meningococcal Meningitis	Primary Hyperaldosteronism	Ulcerative Colitis
Atypical Pneumonia	Disseminated Intravascular Coagulation	Hodgkin Disease	Menopause	Prinzmetal's angina	Unstable angina
Autoimmune Diseases	Disseminated Intravascular Coagulopathy	Hodgkin Lymphoma	Metabolic Syndrome	Prostate Cancer	Urinary Tract Infection
Autoimmune Thyroiditis	Disseminated Lupus Erythematosus	Hospital-Acquired Pneumonia	MG	Protein in urine	UTI
Avian Flu	DJD	HPFH	MI	Proteinuria	Vaginal Infection
Bacillus anthracis infection	Double Pneumonia	HPV	Morphea	RA	Vaginitis and Vaginosis
Bacterial Arthritis	Down Syndrome	Hughes Syndrome	MOTT	Reactive Arthritis	Vaginitis/Vaginosis
Bacterial Vaginosis	Drug-induced Lupus	Huntington Disease	MPDs	Reaven Syndrome	Variant angina
Benign Prostatic Hyperplasia	DS	Huntington's Chorea Disease	MPNs	Renal Disease, Kidney Failure	Vasculitis
Benign Prostatic Hypertrophy	Dysmetabolic Syndrome	Hypercoagulable Disorders or States	MRSA	Rheumatoid Arthritis	VD
Biological Warfare	Ebola Hemorrhagic Fever	Hyperparathyroidism	MS	Rheumatoid Spondylitis	Venereal Diseases
Bioterrorism Agents	Ebola Virus Disease	Hypersensitivity	Multiple Myeloma	Sarcoidosis	Vitamin B12 and Folate Deficiencies
Bleeding Disorders	Ebola Virus Infection	Hypertension	Multiple Sclerosis	SCD	Vitamin B12 Deficiency
Blood in the urine	Encephalitis	Hyperthyroidism	Myalgic Encephalomyelitis	Scleroderma	Vitamin K Deficiency
Bone Marrow Disorders	End Stage Renal Disease	Hypoparathyroidism	Myasthenia Gravis	SEID	Vulvovaginitis
Borrelia burgdorferi Infection	Endocrine Syndromes	Hypothyroidism	Mycobacteria other than tuberculosis	Seizure Disorder	Walking Pneumonia
Borrelia mayonii Infection	Endocrine System and Syndromes	IBD	Mycoses	Sepsis	West Nile Virus
BPH	Epilepsy	Icterus	Myeloceles	Septic Arthritis	Wilson Disease
Breast Cancer	ESRD	Infectious Arthritis	Myelodysplasia	Sexually Transmitted Diseases	WNV
CAH	EVD	Infectious Polyneuritis	Myelodysplastic Syndrome	Sexually Transmitted Infections	Wound and Skin Infections
Cancer	Excessive Clotting Disorders	Infertility	Myelomenigeoceles	Shingles	
Candidiasis	Extraosseous Plasmacytoma	Inflammatory Bowel Disease	Myeloproliferative Disorders	Sicca Syndrome	
Carbohydrate Intolerance	Fibromyalgia	Influenza	Myeloproliferative Neoplasms	Sickle Cell Anemia	
Cardiovascular Disease	Flu	Influenza A	Myocardial Infarct	Sickle Cell Disease	
Celiac Disease	Folate Deficiency	Influenza B	Neonatal Lupus	Sjögren Syndrome	

“It is commonly thought that laboratory tests provide two-thirds to three-fourths of the information used for making medical decisions. If so, test results had better tell the truth about what is happening with our patients.”

Clinica Chimica Acta 2004;346:3-11

The Overdiagnosis Problem

It's multifactorial - everyone involved in health care (clinicians, technicians and patients) plays a role

Or in other words - **EVERY HUMAN**

Overdiagnosis is not just the “lab’s” fault - but it is a MAJOR player

Clinical Practice Guidelines - also MAJOR culprits

The Media

The Industry

YOU

MY THESIS

“For much in medicine, we knowingly sell preeminent precision even though we all know in our heart of hearts we can only deliver educated estimates.

I believe most patients would be very understanding about this imprecision if we were just more open about it.”

-James McCormack, Pharm D (1959 - hopefully not soon)

“We also CAN’T be precise about the imprecision”

I am speaking in general, and do realise there are always some exceptions

I am presenting concepts

I will be providing ball-park estimates

Two Problems with Faking Precision

FALSE BELIEFS

BELIEF #1 - the good/bad thresholds are relatively black and white

BELIEF #2 -when the numbers change these changes are real

These beliefs can potentially lead to inappropriate feelings
of fear, happiness, frustration, confusion...

Both in patients AND clinicians

Sources of Imprecision

Lab
Error

Analytic
variation

Biologic
variation

0.3% CV ~ 1-5%

CV ~ 1-25%

~60% pre-analytical
~15% analytical
~ 25% post analytical

Measurement Landscape

Assuming no pre-analytic issues - timing/labelling etc

Population-based reference intervals

Analytical Variation

Analytic
variation

CVA - analytical variation

Biological Variation

Biologic
variation

CVI - within subject

CVG - between subject

Reference change values (RCV)

Population-based
reference intervals

Population-based reference intervals

The interval/range where 95% of healthy people fall

Lab results report
exact numbers

BUT

Every test result is
really only a range
that hopefully includes
the true result
*+/- 1-2% up to
+/-20-30% or more*

YOU CANNOT BE SERIOUS!!
That ball was on the line

Number of Tests Ordered	Probability of at Least One Abnormal Test
1	5%
2	10%
5	23%
10	40%
15	54%
20	64%

When we do tests, typically
we are wondering:

what are the results NOW, and/or

have they changed from PREVIOUS
measurements

Analytic
variation

Biologic
variation

Every “measurement”
will be “different”

Analytic variability
Biologic variability

Reference Change Values (RCV)

a tool for assessment of the significance of differences
in serial results from an individual

Reference Change Values

Used with SERIAL results to help deal with the analytic imprecision and biologic variation

Coefficients of Variation (total) = analytic PLUS biologic variation

MINIMUM DIFFERENCE
between two consecutive
results which needs to be
EXCEEDED in order for
one to state a
STATISTICALLY
SIGNIFICANT
change has taken place

$$RCV = \sqrt{2} * 1.96 * \sqrt{(CV_{Analytical}^2 + CV_{Intraindividual}^2)}$$

How good, analytically speaking, does a “test” need to be

“The analytical CV (CVA) should be less than one-half the average within-subject biological variation (CVI)”

When it is, the CVA has almost
no impact on the RCV - the
RCV is pretty much determined
by the CVI

Reference change values provide a “p-value”
for the differences between two measurements

THE AMERICAN STATISTICIAN
2016, VOL. 70, NO. 2, 129–133
<http://dx.doi.org/10.1080/00031305.2016.1154108>

EDITORIAL

The ASA's Statement on p -Values: Context, Process, and Purpose

In February 2014, George Cobb, Professor Emeritus of Mathematics and Statistics at Mount Holyoke College, posed these (American Statistical Association 2010). However, these were

“It’s science’s dirtiest secret: The ‘scientific method’ of testing hypotheses by statistical analysis stands on a flimsy foundation.”

“Numerous deep flaws in null hypothesis significance testing.”

“Statistical techniques for testing hypotheses ...have more flaws than Facebook’s privacy policies.”

Experts issue warning on problems with P values

Misunderstandings about common statistical test damage science and society

BY TOM SIEGFRIED 10:30AM, MARCH 11, 2016

Reference Change Values

findings of a “significant difference” JUST means we are ruling out that the difference seen is due to chance

NOT

THAT THE MAGNITUDE OF THE DIFFERENCE SEEN IS THE ACTUAL MAGNITUDE OF THE DIFFERENCE

We believe these two results are different

can't necessarily quantify this
difference with any precision

What about multiple measurements?

Table 1. RCV using multiple estimates of the initial and new set points, expressed as a fraction of traditional RCV from two singleton measurements.

		Number of results estimating initial set point				
		1	2	3	4	5
Number of results estimating new set point	1	1.00	0.87	0.82	0.79	0.77
	2	0.87	0.71	0.65	0.61	0.59
	3	0.82	0.65	0.58	0.54	0.52
	4	0.79	0.61	0.54	0.50	0.47
	5	0.77	0.59	0.52	0.47	0.45

with 4 measurements before and 4 afterwards
(vs 1 before and 1 after)
you can lower the RCV by 50%

Lab
Error

Analytic
variation

Biologic
variation

This is the
problem
and it is
NOT fixable,
it is only
KNOWABLE

Bone Density

Cholesterol

2016 Canadian Cardiovascular Society Guidelines for the Management of Dyslipidemia for the Prevention of Cardiovascular Disease in the Adult

“In individuals with a modified FRS of 5%-9%, yearly monitoring could be used to evaluate change in risk”

AACE 2017 Guidelines

AMERICAN ASSOCIATION OF CLINICAL ENDOCRINOLOGISTS AND AMERICAN COLLEGE OF ENDOCRINOLOGY GUIDELINES FOR MANAGEMENT OF DYSLIPIDEMIA AND PREVENTION OF CARDIOVASCULAR DISEASE

“Lipid status should be re-assessed 6 weeks after therapy initiation and again at 6-week intervals until the treatment goal is achieved.”

“While on stable lipid therapy, individuals should be tested at 6-to 12-month intervals”

Monitoring Cholesterol Levels: Measurement Error or True Change?

Paul P. Glasziou, MBBS, PhD; Les Irwig, MBBS, PhD; Stephane Heritier, PhD; R. John Simes, MBBS, MD; and Andrew Tonkin, MBBS, MD, for the LIPID Study Investigators

Background: Cholesterol level monitoring is a common clinical activity, but the optimal monitoring interval is unknown and practice varies.

Objective: To estimate, in patients receiving cholesterol-lowering medication, the variation in initial response to treatment, the long-term drift from initial response, and the detectability of long-term changes in on-treatment cholesterol level ("signal") given short-term, within-person variation ("noise").

Design: Analysis of cholesterol measurement data in the LIPID

of variation, 7%) to 0.60 mmol/L (23 mg/dL) (coefficient of variation, 11%), but it took almost 4 years for the long-term variation to exceed the short-term variation. This slow increase in variation and the modest increase in mean cholesterol level, about 2% per year, suggest that most of the variation in the study is due to short-term biological and analytic variability. Our calculations suggest that, for patients with levels that are 0.5 mmol/L or more (≥ 19 mg/dL) under target, monitoring is likely to detect many more false-positive results than true-positive results for at least the first 3 years after treatment has commenced.

Ann Intern Med 2008;148:656-61

VARIATION

Total chol ~ - 0.80 to 0.80 mmol/L (~30 mg/dL)

LDL chol ~ - 0.5 to 0.5 mmol/L (~20 mg/dL)

Average increase in cholesterol is 0.5-1%/year

“After initial change only measure every
3-5 years”

DOSE increases do not lead
to proportional EFFECT increases
% reduction in LDL cholesterol

LDL cholesterol - 2 mmol/L ~80mg/dL

RESEARCH

When to remeasure cardiovascular risk in untreated people at low and intermediate risk: observational study

BMJ 2013; 346 doi: <http://dx.doi.org/10.1136/bmj.f1895> (Published 3 April 2013)

Cite this as: *BMJ* 2013;346:f1895

“Repeat risk estimation before 8-10 years is not warranted for most people initially not requiring treatment”

Am J Epi 2004;161:565-74

Yet another IMPORTANT issue for measurements of glucose, cholesterol, blood pressure and bone density

These are RARELY measures of any disease

They are simply RISK FACTORS

They should be presented in the context of the risk of developing important clinical outcomes - heart attacks, strokes, ESRD etc

Languages: English (EN)

The Absolute CVD Risk/Benefit Calculator

Framingham
 US Data, 10 Year Risk
 Heart attacks + angina/coronary insufficiency + heart failure + strokes + intermittent claudication

QRISK®2-2014
 UK Data, 10 Year Risk
 Heart attacks + strokes

ACC/AHA ASCVD
 US Data, 10 Year Risk
 CHD death + nonfatal heart attacks + fatal/nonfatal strokes

PREDICT
 New Zealand Data, 5 Year Risk
 Heart attacks + angina + heart failure + strokes/TIAs + peripheral vascular disease

Age
 ——— 50 ——— years

Gender
 Male ☒ Female

Smoker
 Yes ☐ No ☒
CVD risk is reversed after 5-10 years of no smoking

Diabetes
 Yes ☐ No ☒

Systolic Blood Pressure
 ——— 120 ——— mmHg
Enter present blood pressure regardless of treatment
120 mmHg is used for baseline risk

On treatment for BP
 Yes ☐ No ☒
Click YES if taking blood pressure medication
Only applies if SBP is greater than 120 mmHg

Total Cholesterol
 ——— 3 ——— mmol/L
Cholesterol should be prior to drug treatment
3 mmol/L is used for baseline risk.
[Click to change to mg/dL.](#)

HDL Cholesterol
 ——— 1.3 ——— mmol/L
HDL should be prior to drug treatment
1.3 mmol/L is used for baseline risk.

Chronic Kidney Disease
 CKD status is not part of the risk algorithm but is used for calculating the benefit of certain therapies
 Yes ☐ No ☒

Relative Benefit: 0%
Benefit often has nothing to do with the effect on the surrogate marker. At present, you can only select one intervention at a time.

Physical Activity

(Lyrica®)

All Treatments
(comparison)

Curious about capsaicin, botox, tramadol, carbamazepine, or venlafaxine for neuropathic pain?
[Click here to learn more.](#)

Meaningful Pain Relief from Amitriptyline (30% reduction in pain scores)

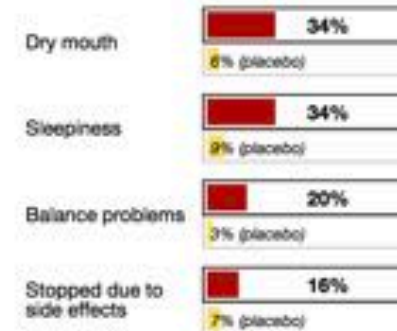

A typical placebo group response seen in pain studies is 25% but this can be adjusted in the [FAQ](#) section.

Meaningful Pain Relief

An example of a 30% reduction in pain scores is a decrease from 6 to 4 on a 10 point pain scale

Amitriptyline Harms

Other Considerations

- Typically taken at bedtime due to sleepiness effects
- Approximate cost (CAD) for 30-day supply (without dispensing fee): \$1.50 to \$3.50

“The obscure we see eventually.
The completely obvious, it seems,
takes longer.”

Edward R Murrow 1908-1965

The Problem
is

REVISED

Data collated primarily from here - <https://www.westgard.com/biodatabase1.htm>
but some taken and confirmed from a few other sources - numbers rounded off for ease of use
James McCormack BSc (Pharm), Pharm D - therapeuticseducation.org

If I was the boss of “LAB” result reporting

All of this could be done today

Shift from a laboratory perspective to a patient-centered viewpoint

Using **BALLPARK** estimates

ALWAYS provide the imprecision

Provide MUCH more definitive guidance

Stop using terms like low, medium, high or significant

If they are “risk factor” measurements then they should only be provided with “risk” estimates

Do not do a test without discussion of a pre-test probability and then provide a post-test probability

Make many tests more “inconvenient”?

As much as
humanely possible

DO NOT use “flags”, adjectives, or mention SDs, Gaussian distributions, two-sided tests, Z-scores, T-scores, confidence intervals, or p-values.

Not sure if we even need point estimates

Patient Information Show More Patient Details

Flags Results Reference Range Units

General Comments Because of lab test and human variation, lab tests results can only be provided within a range

YOUR TRUE RESULTS ARE LIKELY SOMEWHERE IN THE RANGE INDICATED BY THE YELLOW STRIP

White blood cells

Potassium (mEq/L)

HbA1c (%)

95% of HEALTHY people have results somewhere in this range

Typically, results in this range are considered in the “normal” range

5% of HEALTHY people have results somewhere in this range

Typically, results in this range are considered outside of the “normal” range

There is no “normal/abnormal ”range - the higher the value the higher your CVD risk - discuss your risk with your HCP

DATE 1
DATE 2
Typically, if 2 test results from different times overlap we consider the results to not be different
If they don't overlap then we likely think they have changed

Deals with the reference interval

Deals with the analytical and human variability

Deals with risk lab tests

DATE 1

DATE 2

OVERLAP Deals with reference change values

Lab Value thoughts

have you first looked at how the patient is clinically doing?

will the result of your test change what you would do?

does a “risk factor” test improve your assessment of risk?

how big a change do you expect from your treatment?

what is the sensitivity and specificity of the test? - pre-test and post-test probability

how long does that change take?

how big a change is needed to be confident a change has occurred?

**When someone
does something
wrong, don't forget
all the things they
did right.**
